MORTALITY STATISTICS

OF THE

SEVENTH CENSUS OF THE UNITED STATES, 1850:

EMBRACING—

- | | |
|-------------------------------|------------------------------|
| I.—THE CAUSE OF DEATH, | IV.—THE NATIVITY, |
| II.—THE AGE AND SEX, | V.—THE SEASON OF DECEASE, |
| III.—THE COLOR AND CONDITION, | VI.—THE DURATION OF ILLNESS, |
| VII.—THE OCCUPATION, | |

OF THE

PERSONS REPORTED TO HAVE DIED IN THE TWELVE MONTHS PRECEDING THE FIRST OF JUNE
OF THAT YEAR,

WITH

SUNDRY COMPARATIVE AND ILLUSTRATIVE TABLES.

BY J. D. B. DE BOW,
SUPERINTENDENT UNITED STATES CENSUS.

WASHINGTON:
A. O. P. NICHOLSON, PRINTER.
1855.

LETTER

FROM

THE SECRETARY OF THE INTERIOR,

TRANSMITTING

The Mortality Statistics of the Seventh Census, prepared by the Superintendent of the Census, in compliance with the resolution of the House of Representatives of December 13, 1854.

DECEMBER 13, 1854.

"Resolved, That there be printed for the use of the members of the present House of Representatives, fifteen thousand copies of that portion of the returns of the Seventh Census which relates to the Mortality Statistics of the United States, to be arranged by the Superintendent of the Census: *Provided*, The same shall be printed in royal octavo form, and not to exceed three hundred pages."

DEPARTMENT OF THE INTERIOR,
Washington, November 23, 1855.

SIR: I herewith transmit to you the Mortality Statistics of the Seventh Census, as arranged by the Superintendent of the Census, under the resolution of the House of the 13th December, 1854.

Very respectfully, your obedient servant,

R. McCLELLAND,
Secretary.

To JOHN W. FORNEY,
Clerk of the House of Representatives.

CENSES OFFICE, November 20, 1855.

SIR: I stated in my last official report that the mortality statistics of the Census were nearly ready for publication, and subsequently, at the instance of a committee of Congress, estimated that four or five months would be necessary for their completion in the shape in which they were required by that body.

The appropriation was made on the 4th of March. You will, therefore, perceive that a delay of several months more than was anticipated has occurred, for which I assign as reasons—first, the utter impossibility of estimating very closely where such an amount and kind of material are involved; second, the peculiar experience required, limiting necessarily the clerical force; third, the state of my own health, impaired by long, close, and arduous labors upon the Quarto and Compendium, putting it out of the question for me, during several months, to exercise any personal supervision of the work. My anxiety to see the volume completed has not been surpassed by your own, and to the extent of that anxiety I bear cheerful testimony.

To embrace the whole material within the compass of three hundred pages, exclusively of titles, required my constant superintendence of the press up to the present moment, and it is but fair to add, in this connexion, that the reading of proof was left entirely to the printers, the means at my disposal being inadequate to the employment of special readers, (as was done upon the tables of the Compendium,) familiar with statistics, and responsible to the office for their accuracy.

The calculations for the work were all made under my direction by persons approved for their capacity, who have been employed in the office from almost its first organization. This is the guaranty I have for their correctness; for I could not incur the expense of those frequent revisions by different sets of persons, resorted to in the report of last year, and it was plainly impossible for me to make them myself.

I believe the errors, however, will not be found more numerous nor important than are to be met with in statistical works generally; and although I know that the work is very incomplete, from the original deficiencies of the returns, and have so stated it in the introductory chapter, I am yet assured that its publication will subserve many and valuable purposes.

The Census Office, which was revived by the act calling for this report is, by its completion, again dissolved, and my duties as Superintendent of the Census, under your reappointment, are at end. I have endeavored to fulfill the trust faithfully and energetically, and, under all the circumstances, to secure the best results.

With high regard, your obedient servant,

J. D. B. DE BOW.

To Hon. R. McCLELLAND, *Secretary of the Interior.*

INTRODUCTORY CHAPTER.

PROGRESS OF VITAL STATISTICS—HISTORY OF IN THE UNITED STATES.—PLAN AND RESULTS OF THE VOLUME.

It is more easy to satisfy mankind of the value of any other branch of statistics than that which relates to the numbers that die in any given period, their ages, their sex, occupation, condition and nativity, and the causes which produce such deaths. The consequence is that the facts remain uncollected or unrecorded, while everybody seems busy enough, more especially in our practical, money-making country, in running after those which relate to the fluctuations of stocks, the valuation of exports and imports, the rates of taxation and the results in agriculture and manufactures, internal improvements and general commerce. The life of man is of less importance than his larder and his cloth. It was the remark of a physician, now no more, founded on severe experience, that the lawyer who saved the property of his client was always quicker, better and more cheerfully paid than the doctor who saved his life. Steamboat and railroad companies understand this well enough, for whilst they must pay heavily for destroying a bundle of merchandise, in human life they can and do wanton at pleasure.

Such being the case, it is not singular that investigations having for their object sanitary improvement are pursued slower and later in all countries than those which relate to property. They meet with greater impediments and their results are least consulted or credited. Man is the same in all ages, and this fact meets us in all.

The Romans had, indeed, their registries, in which were carefully preserved the particulars of population, as births, sex, deaths, etc., but there is no evidence, we believe, of a *regular system of registration of births, marriages and deaths* prior to that of Geneva in the middle of the sixteenth century. Subsequently, most of the European nations have followed the example of Geneva, and their results for several periods may be found elaborately given in the sixth annual report of the registrar general of England, 1847. A condensed table from this report is here presented :

Countries.	Year.	Population.	Annual deaths.		Annual mortality.	
			Years.	Numbers.	Per cent.	Living to 1 death.
England.....	1841	15,927,867	1832-42	846,905	2.207	45
France.....	1841	34,213,929*	1832-42	816,540	2.397	42
Prussia.....	1840	14,923,501	1833-41	692,849	2.658	38
Austria.....	1840	21,571,594	1838-42	651,239	2.995	38
Russia.....	1842	49,525,420	1842	1,856,183	3.590†	28

* The population of France, according to the corrected returns, is 34,230,178.

† Corrected for the stillborn included in the 1,556,183 deaths; the stillborn have been subtracted from the deaths in Austria and Prussia; they are not included in the deaths of France, and are not registered in England.

On comparing the rate of mortality in England with the mortality of France, Prussia, Austria, and Russia, it appears to be lower in this country than in either of the four States; but it must be remembered that Scotland and Ireland are not included, no steps having hitherto been taken for registering and abstracting the births and deaths in those parts of the United Kingdom, the only countries now in Europe where it has not been deemed advisable to record and analyze such facts, with the exception, perhaps, of Hungary, Spain, Turkey, and Greece.

Parochial registration, which had been in use in England for more than two hundred years, was found so inadequate and defective that the subject was brought into Parliament in 1833 and referred to a committee, who, after thorough investigation, reported as follows:

1. That the subject is urgently important.
2. That it involves matters of great public and national interest, as well as individual satisfaction, and rights and claims to property, and deserves the attention of the humblest artisan as well as of the most philosophical and statesmanlike inquirer.
3. That the existing law is imperfect and unjust, and requires not only partial amendment but real fundamental reform.
4. That great trouble, vast expense, utter uncertainty, capricious changes, and local and general evils exist, while no means are supplied to obtain the information other countries possess and justly value, as to the state of disease, the operation of moral and physical causes on the health of the people, the progress of the population, and other matters on which accurate knowledge can scarcely be too highly appreciated or too intensely pursued.

The result of this investigation and report was an act for the registration of births, marriages and deaths in England, which, introduced by Lord John Russell, and supported by Peel, Morpeth and Bowring, passed on the 6th June, 1836. Under the operation of the act regular annual reports have been made, of which a complete series have been furnished for the use of the Census Office, the present year, through the courtesy of Mr. Graham, the registrar general. These volumes vary from 5 to 700 pages, and are issued in the most admirable style. The following table is extracted from the report for 1850, p. 14:

Annual rate of mortality per cent. of males and females at different ages in England.

Years...	1833	1839	1840	1841	1842	1843	1844	1845	1846	1847	1848	1849	1850	Average of the 13 years 1833-50.

45....	1.969	1.849	1.867	1.842	1.826	1.844	1.825	1.807	1.859	1.790	1.889	1.995	1.478	1.894
55....	3.427	2.730	2.929	2.740	2.744	2.692	2.773	2.668	2.783	3.226	2.860	3.355	2.625	2.846
65....	5.919	5.554	5.599	5.841	6.013	5.877	6.652	5.856	6.156	6.264	6.672	6.596	5.717	6.049
75....	13.251	12.516	13.541	13.375	13.084	13.637	13.494	13.036	13.794	15.045	13.604	14.628	12.634	13.404
85....	26.463	25.212	26.321	23.255	25.438	27.655	28.434	27.569	30.350	32.104	27.623	28.028	25.922	28.037
95& up	41.599	39.015	41.150	45.967	42.832	46.679	44.616	42.036	52.200	53.280	46.518	43.323	42.927	45.214

The table may be read thus:—Of 100 males living of the age of 35 and under 45, 1.542 died in 1833, 1.255 in 1839, 1.217 in 1841, and so on for other years; a correction for increase of population having been made for each age at each year.

In the year 1789 Dr. Wigglesworth formed certain tables from returns embracing 4,893 deaths, which were in use in Massachusetts up to the commencement of her registration system in 1842.

"If the diminutive number," says the report of 1851, "of less than five thousand deaths, collected without official responsibility, from a small region of country, was deemed of so much importance, of how much more value will be the results obtained from the returns from every section of our territory through a period of eleven years, of about one hundred and thirty-five thousand deaths, observed and recorded with more minuteness, and probably more accuracy, and certified to be correct by town officers whose official duties require them to perform the service with as much truthful precision as possible."

The first registration report of Massachusetts was made to the general court in February, 1843, according to the act of March, 1842, and there have been published since regular reports, each more elaborate and minute in its details, until the system in that State has come to be considered very nearly perfect.

The following table from these digest the results of deaths :

CAUSES OF DEATH.	WHOLE NO. OF DEATHS.		PER CENTAGE OF DEATHS.	
	One year, 1853.	Eleven years & eight mo's ending Dec. 31, 1852.	One year, 1853.	Eleven years & eight mo's ending Dec. 31, 1852.
ALL CAUSES.....	20,301	148,024		
SPECIFIED CAUSES.....	19,561	135,451	100.	100.
I. ZYMOTIC DISEASES.....	5,446	40,651	27.84	29.87
<i>Sporadic diseases of,</i>				
II. UNCERTAIN SEAT.....	2,400	16,562	12.22	12.17
III. NERVOUS ORGANS.....	2,003	13,427	10.27	9.69
IV. RESPIRATORY ORGANS.....	5,783	38,713	29.56	27.94
V. CIRCULATIVE ORGANS.....	475	2,888	2.48	2.08
VI. DIGESTIVE ORGANS.....	1,191	8,931	6.09	6.55
VII. URINARY ORGANS.....	88	608	.45	.44
VIII. GENERATIVE ORGANS.....	222	1,575	1.13	1.14
IX. LOCOMOTIVE ORGANS.....	113	752	.85	.55
X. INTEGUMENTIVE ORGANS.....	13	182	.07	.09
XI. OLD AGE.....	997	8,451	5.10	6.13
XII. VIOLENT CAUSES.....	516	5,356	4.17	3.56

By this it will be noticed that the class of diseases designated as zymotics, and the diseases connected with the respiratory organs, have been most fatal during the year under consideration, 57.40 per cent. of all the deaths whose causes have been reported having been caused by them. This has been the case, also, in the twelve years and eight months in which registration has been carried on in Massachusetts.

From the tenth annual report of Massachusetts we take the following:

"As observed above, the law in this State was passed in 1842. This law was modified and improved by the act of March 16, 1844, and still further by the act of May 2, 1849. The State of New York followed with a registration law, passed April 28, 1847, and made their first report in April, 1848. New Jersey passed a law on the subject March, 1848, and remodelled it with improvements by the act of March 19, 1851. Their report, before us, bears date of February, 1852. The registration law of Connecticut passed June 24, 1848. We have their three reports; the last is dated May, 1852. New Hampshire passed a less efficient law July 7, 1849, and altered it without much improvement July 4, 1851.

"The act in Pennsylvania on this subject passed the legislature of that State April 14, 1851, and became a law without the signature of the governor, as certified by the proper authorities, January 12, 1852. During the last session of the legislature that body manifested their approbation of it by appropriating \$4,500 to put the law into operation.

"On the 9th of January, 1852, the legislature of Kentucky passed a registration law, and the subject will come from influential sources before the next legislature of South Carolina. All of these enactments, and especially the reports that have been made in different States in compliance with them, bear an analogy to the same from our own State which had preceded them.

"This indicates not only the estimated importance of the subject as its results develop themselves, but also the confidence reposed in the system adopted by this State. The former feature, however, has the most notable point."

The federal census of 1850 furnishes the first instance of an attempt to obtain the mortality during one year in all of the States of the Union, and had there been as much care observed in the execution of the law as was taken in framing it, and in the preparation of necessary blanks, a mass of information must have resulted relating to the sanitary condition of the country, attained as yet in no other part of the world. This, however, would have been expecting too much. It was to take for granted, first, that the person interrogated in each family, whoever he might be, with regard to its affairs, would be able to recollect whatever death had occurred in it within the period of twelve months; and, second, to give the true designation of the cause of such death. 1. One would think it not unreasonable that the facts of actual deaths would be striking and impressive enough in every household to be remembered for a much longer period than a single year, yet the returns of the marshals have only to be examined with care and deductions made from them, to satisfy the most careless observer that in the Union at large at least one-fourth of the whole number of deaths have not been reported at all. Making allowance for even this error, the United States would appear to be one of the healthiest countries of which there is any record. The varying ratios between the States, as drawn from the returns, show not so much in favor of or against the health of either, as they do, in all probability, a more or less perfect report of the marshals. Thus it is impossible to believe Mississippi a healthier State than Rhode Island, etc. For *rural* population the returns are no doubt nearer correct than they are for *urban*, and the old States are in general better reported than the new. 2. So far as the educated are in question, the assigned causes of death on the returns, may be considered sufficiently near the truth for popular purposes, though falling far short of the precision necessary in skillful scientific calculations; but among the large mass of the community vagueness and inaccuracy may naturally be expected, even where the parties are disposed to speak the truth and make the best effort to do so. The physician's certificate of the cause of death is the only positively reliable evidence of the fact.

The other points and particulars of inquiry, such as the age, sex, color, condition, occupation and nativities of parties, the season of de-

cease and duration of sickness, stand upon somewhat different ground and are, from their character, no doubt as correctly answered as the inquiries of the census relating to the ages, pursuits, etc., of the living.

Upon the whole, then, and we cannot be too emphatic on the point, whilst this publication of the mortality statistics of the census is disclaimed as of authority in showing the respective pretensions to healthfulness or the degree of unhealthfulness of the several States, or of very great scientific worth in showing the *specific* causes of death, it may be considered of much value, notwithstanding, in giving with even ordinary claims to precision very minute phenomena relating to the deaths of about one-third of a million of people scattered over three millions of square miles of territory. The value of such a multitude of facts cannot but be very great, even although they do not constitute the whole of them. We are every day accustomed to draw deductions for the whole from a part, and to argue out the true and complete from the approximate and uncertain.

It may also be said in favor of the returns as published, that they constitute but a beginning, and are not, perhaps, further from the truth than were the first attempts in States having registration systems. The same improvement as in these States may be expected hereafter. The publication of this volume will stimulate investigation and lead to a better understanding of the importance of the subject.

Upon page 49 will be found the instructions to marshals under which the mortality statistics were collected. The instructions cover a wide field and are necessary to an understanding of the schedules. But a small part of the material collected can be condensed into this publication. To have issued the work in detail by towns, counties, etc., upon the formula proposed on page 110 of Compendium,* and which should have been the one, must have swelled it to 2 or 3,000 pages. The act of Congress confines it to three hundred. It became necessary then to change the formula, and condense by States and divisions of States, as will be seen particularly hereafter. The very best, it is believed, has been done that was possible under the circumstances. Those who may desire, however, to consult the material in detail, for counties, &c., necessarily prepared in the progress of

* The formula was as follows :

Disease or cause of death. Total number of deaths.	Whites.		Free colored.		Slaves.		Married.		Place of birth.	Occupation.	Period of sickness.	Season.
	Native divided as males and females.		Black.	Mulatto.	Black.	Mulatto.	White.	Free col'd.				
	Foreign.											
	Same subdivisions of age and sex as native.											
Birth.			Same subdivisions as whites.		Same subdivisions as whites.		Same subdivisions as whites.		Subdivided by columns for State, for New England, Middle, Southern, S. W. and N. W. States, and for England, Ireland, Scotland, Germany and other foreign countries.	Subdivided by columns for mechanical, agricultural, commercial, laboring, domestic, and other pursuits, &c.; each divided into ages, as 15 to 20, 20 to 30, &c.	Subdivided by columns for 1 week, 1 week to 1 month, 1 month to 3 months and over 8 months.	Subdivided by columns for spring, summer, autumn and winter.
Under 1 year.												
1 and under 5.												
5 and under 20.												
20 and under 50.												
50 and under 100.												
100 and upwards.												
Total.												

the work, will find the manuscripts in the Census Office under the charge of the Secretary of the Interior, compiled in some cases with all of the elaboration proposed in the Compendium.

To the same cause must be attributed the very small number of cities and towns that are given in the volume, notwithstanding the figures were separated and aggregated for nearly every considerable town in the Union.

The whole of the statistics now presented are arranged with reference to—

I. *The leading Cities and Towns.* These will be found on pages 302-303 of the volume. The statistics could not be given in the same detail as those for the States, except in the instances where they are published as sections of such States, to wit, Boston, New Orleans, &c. Other tables are given, compiled from the Compendium, showing, for purposes of comparison, the ages, sex, nativities, &c., of the living population of these cities. A few facts digested from the city reports are also embraced on page 16.

II. *Sections of several States.* The sheets were prepared for all of the States, but it became necessary to select for publication from among them, so as to include States in the several great divisions of the Union. The sections are made up with reference to physical peculiarities as far as possible, such as rivers, sea-coast, lakes, mountains, &c. A table of the living population of the sections embraced will be found on page 32. The limits of the work precluded the insertion of ages, sex, &c., in the same connection, which is much to be regretted.

III. *All of the States and Territories.* Comparative tables of the living population, their ages, sex, nativity, occupation, &c., accompany these statistics.

IV. *The United States.* The United States tables are arranged somewhat differently from those of the States, as will be explained hereafter. In these the classification is adopted which is usual among vital statisticians. The formula proposed by Dr. Edward Jarvis, of Massachusetts, a distinguished authority in these matters, and to whom the Census Office is under many and great obligations, was adopted in every particular. His letter, which is given on page 45, enters minutely into the consideration of the subject.

All of the tables show, with reference to the mortality of the several States—

First. *The cause of death.* This was taken, in the first instance, literally from the returns of the marshals. The list was then reduced by combining such as were evidently merely verbal differences, and about which there could be no mistake, as, for example, scarlet, scarletina, &c., fever and ague, chills, &c. A further reduction was made in some cases not so obvious by reference to the best medical authorities. The list was then ready for publication. The office did not deem it advisable to condense for the State tables to the extent recommended by Dr. Jarvis, believing it would be better to enter into greater detail. Indeed, had space admitted, the cause of death assigned in each case on the returns would have been given, although leading often to inconsistencies. It is true that causes are assigned for death which are not in their nature fatal, but these will be found in

most of the publications made by States and Cities. The condensations would be proper in aggregating for the United States tables. On page 304 will be found a list of most of the causes assigned on the returns. The labors of a medical man skilled in such matters was only necessary in these final condensations. Dr. Jarvis was, therefore, consulted, and his letter was predicated upon a list of diseases furnished him, very nearly the same as that adopted for the State tables. Had the appropriation been adequate, the States would have been shown by classes as well as by individual diseases. To have given an aggregate table showing for each State, for each disease, all of the peculiarities, as age, color, condition, must have required an extent of space, in addition, nearly equal to that of the present volume. Dr. Jarvis says that he has added some diseases omitted in the list sent to him; the omission was accidental, as the terms he specified were adopted in the office work.

Classified and aggregate deaths in the several States.

SECOND. Age and sex of deceased. This table, combined with the cause of death, could not be made up more minutely. The ages were selected after consultation with leading medical writers in different parts of the Union. The results would have been more valuable had it been possible, within the space allotted, to separate the several colors, native and foreign. Tables of the living population at

the several ages are also given. The following will show the aggregate number who died at each age, male and female, in the United States, arranged according to classes, and also the ratios per cent. to the total living of those ages, and to the total deaths of all ages, exclusive of unknown.

	Under 1.				1 and under 5.				5 and under 10.				10 and under 20.

THIRD. Color and condition. What is said in the last paragraph with reference to ages need not be repeated here; this table will be found of much value, and for comparison a table is extracted from the Compendium of the Census showing the whites, free colored, and slaves, in each State, and also the blacks and mulattoes. The following table is presented, showing the deaths and per cent. to the total living of each color and condition:

	WHITES.		COLORED.								Aggregate deaths.
	Total.	Ratio.	Slaves.				Free.				
			Blacks.		Mulattoes.		Backs.		Mulattoes.		
			Total.	Ratio.	Total.	Ratio.	Total.	Ratio.	Total.	Ratio.

FOURTH. Nativity. The returns show the exact nativity in each instance, but it was necessary to condense for the native population according to the several great sections of the Union, to wit, New England, &c. The foreign nativities are condensed even more. By Germans are meant those from all Germanic sources, viz: Prussia, Austria, Holland, &c. In the aggregate tables of the United States those born in the State in which they died are separately given. Those born in New England in the same tables must be understood to mean those born in that section who died out of the State in which they were born; the same for the other sections. This must be known to fully comprehend the table. The proportion of foreign deaths to the whole foreign population of the Union shows more favorably, no doubt, than is the fact, since in all cases where the nativity was left blank and not marked, "unknown," by the marshal⁴ the party was construed to have been born in the State—this being always implied where the contrary was not expressed. Most valuable tables could have been given had we been able to show the ages of deceased foreigners, for it is by reference to these only that any comparative ratios of mortality, native and foreign, can be framed. There is sufficient, however, to indicate that the mortality among foreigners does not differ so widely from that of the natives as has been supposed. Several tables of nativities of the living population are included; the one below combines the mortality with nativities.

Deaths, Native and Foreign, with Ratios to Living Population.

	All classes.			Per cent. to total deaths.	Per cent. to total living populat'n.	Total native deaths.	Total foreign deaths.	Per cent. native, including slave.	Per ct. foreign.
	Males	Females	Total.

FIFTH. *Occupations.* These also were necessarily classed, adopting very nearly the classification used in the Compendium of the Census. "Agriculture," and "Other Occupations," are the same in both tables; "Educational" of Mortality Report includes the "Army," "Law, Medicine, &c.," "Government Civil Service," and "Other Educational Pursuits." "Commercial" of Compendium embraces the similar head in this work, combined with "Mechanical" of that. "Sea and River Navigation," embraced with "Commercial." "Domestic Servants," included with "Labor," not "Agricultural." The table cannot show the tendency of certain pursuits to longevity, or the contrary, but only how far these pursuits are more or less exposed to the influence of certain diseases. The occupation of slaves, though given in many cases on the returns, were not taken off for publication, since no similar tables could be framed for the living slave population. The occupation of females is, for a similar reason, not given in the mortality tables.

SIXTH. *Duration of Sickness.* The periods selected are as many as could be embraced; the results are also aggregated.

SEVENTH. *Season of Decease.* It was impossible to give the months in detail; the seasons were selected after consultation with medical writers. It is obvious that these would include practically different months in different sections. In order to show the fall diseases by autumn is intended in the publication August, September, and October; winter will therefore embrace November, December, and January, &c. This is somewhat arbitrary, but no arrangement by seasons for all sections of the Union could be less so. The table annexed condenses the results and gives the appropriate ratios.

Season of decease and duration of illness.

	Season of decease.							Duration of sickness.				
	Spring.	Ratio.	Summer.	Ratio.	Autumn.	Ratio.	Winter.	Ratio.	Ratio under 1 week.	Ratio 1 week under 1 m'th.	Ratio 1 month under 8 m's.	Ratio 8 m'ths and over.

The tables prepared for this work do not, as must have been expected, harmonize in all particulars with those previously published by the office in regard to the mortality returns. In such a multitude of figures differences were but natural. They do not, however, reach an amount to affect in an appreciable degree the ratios. The work was all prepared anew, and with severe revisions. The tables of the Compendium being, nevertheless, valuable and necessary for illustration, are incorporated. (See table IV., p. 37.)

Table VI., on pages 29-31, and also the table on page 11, will be found in several unimportant particulars to differ from the other tables. At the time of going to press they were not harmonized, but as the difference in no case affects the ratio the fortieth part of one per cent., it was conceived best not to reject the tables.

It ought to have been observed before, that, for condensation in the State tables, the unknown "season of decease" and "duration of sickness" are omitted, but can be always ascertained easily by deductions from the totals.

To Mr. Shattuck, of Boston, and Dr. Barton, of New Orleans, the office expresses its indebtedness for many important suggestions, and for the aid which has been derived from their invaluable Sanitary Reports.

The clerical and typographical errors discovered upon examination in the State sheets are corrected in the aggregate tables, including cases of manifest inconsistencies of disease, with age and sex, such as an adult dying of a disease of infancy, &c.

The total female slaves in Mississippi should read 2389 instead of 238, the 9 being dropped in the print. The total natiivities of Massachusetts should read 1170 instead of 116.

NOTE.—Extracted from Compendium, pp. 106-107.

The following exhibits the proportion of annual deaths to the whole population of certain European countries: Norway, one in 51; Sweden, one in 41; Russia, one in 25 92-100; Denmark, one in 40; Mecklenburg, one in 46; Saxony, one in 31; Wurttemberg, one in 31; North Holland, one in 20 6-10; Belgium, one in 43; France, one in 32 6-10; Azores, one in 43; Gambia, one in 23 47.

Number and centesimal proportions of deaths of different ages that occurred in Ireland during 10 years, between June 6th, 1851, and June 6th, 1861.

Births to 1 year, 259,129, 23.83 per cent.; 2 to 5 years, 165,918, 14.41 per cent.; 6 to 10 years, 58,272, 5.06 per cent.; 11 to 15 years, 53,259, 7.25 per cent.; 21 to 30 years, 101,518, 8.82 per cent.; 31 to 40 years, 86,585, 7.52 per cent.; 41 to 50 years, 82,537, 7.17 per cent.; 51 to 60 years, 103,518, 9.43 per cent.; 61 to 70 years, 89,507, 7.77 per cent.; 71 to 80 years, 69,597, 6.08 per cent.; 81 to 90 years, 27,579, 2.40 per cent.; 91 to 100 years, 8,865, 0.78 per cent.; ages not specified, 36,120. Total, 1,187,374, 100.00 per cent.

In *England*, according to the report of the Sanitary Commission, the number of deaths of persons under five years of age during a period of nine years, was 11,765, being nine per cent. annually of the total population of that age; of persons aged from five to ten years, 1,312 or 1.25 per cent.; from ten to fifteen years, 633 or 0.72 per cent.; from fifteen to twenty, 739 or 0.74 per cent.; from twenty to thirty, 8,203 or 1.24 per cent.; from thirty to forty, 2,917 or 1.62 per cent.; from forty to fifty, 1,948 or 2.15 per cent.; from fifty to sixty, 1,273 or 2.97 per cent.; from sixty to seventy, 1,451 or 4.75 per cent.; from seventy to eighty, 751 or 9.78 per cent.; from eighty to ninety, 379 or 19.04 per cent.; over ninety, 75 or 29.61 per cent.; those of all ages, 26,121 or 2.63 per cent.

In *New York*, according to the annual report of the City Inspector, there were in 1853, 22,702 deaths, of which 12,233 were males and 10,469 females. Those of foreign birth were 7,104. Of the age of one year and under, there were 7,724 deaths; of one to two years, 2,912; of two to five, 2,297; of five to ten, 171; of ten to twenty, 854; of twenty to thirty, 2,441; of thirty to forty, 2,031; of forty to fifty, 1,413; of fifty to sixty, 866; of sixty to seventy, 671; of seventy to eighty, 489; of eighty to ninety, 140; of ninety to one hundred, 31; of one hundred and over, 2; ages unknown, 51. Here follows the ratio to total mortality in each decade in New York:

Age.	1847.	1848.	1849.	1850.	1851.	1852.	1853.
Birth to 10.....	1 to 1.60	1 to 1.43	1 to 1.57	1 to 1.55	1 to 1.67	1 to 1.86	1 to 1.65

Unknown.....	" 74.16	" 111.25	" 74.00	" 99.25	" 243.75	" 175.61	" 415.18

In *Philadelphia*, according to the report of the Board of Health for 1850, the total number of deaths during the year was 5,559, of whom 2,557 were under one year of age; 1,055 between one and two years; 930 between two and five; 419 between five and ten; 145 between ten and fifteen; 212 between fifteen and twenty; 1,649 males and 1,542 females of twenty and upwards; 460 over seventy.

In *Baltimore*, by the report of the Board of Health, there were in 1850, 4,576 deaths, of which 411 were still-born; 995 of persons under one year of age; 530 between one and two years; 414 between two and five; 174 between five and ten; 93 between ten and fifteen; 144 between fifteen and twenty; 435 between twenty and thirty; 438 between thirty and forty; 386 between forty and fifty; 195 between fifty and sixty; 207 between sixty and seventy; 152 between seventy and eighty; 59 between eighty and ninety; 21 between ninety and one hundred, and 1 above one hundred.

In *Charleston*, according to the report of the Board of Health in 1850, there were 216 deaths of white males; of white females, 153; total white, 374; black males, 225; black females, 257; total black, 482; total deaths, 856. (This was a sickly year.) Of these, 762 were native born; 123 foreign; 29 were born in other States of the Union.

Mobility.—The following table from Fenner's "Southern Medical Reports" gives the deaths in Mobile during the years 1844, 1845, 1846, 1847, and 1848.

Years—Whites.	Unknown.	Under 1 year.	1 under 10.	10 under 20.	20 under 30.	30 under 40.	40 under 50.	50 under 60.	60 under 70.	70 under 80.	80 under 90.	90 under 100.	Over 100.	Total males.	Unknown.	Under 1 year.	1 under 10.	10 under 20.	20 under 30.	30 under 40.	40 under 50.	50 under 60.	60 under 70.	70 under 80.	80 under 90.	90 under 100.	Over 100.	Total females.	Total of all cases.

In *New Orleans* the Board of Health reported for the year preceding June, 1850, 7,565 deaths against 8,641 reported in the Census. The following table will show the ages and color of those dying in 1849 and 1850 at New Orleans. Lafayette has since been incorporated with the city. The deaths in 1850 were regularly returned only in part. About 1,000 were mentioned by the marshal without any particulars, and were not therefore included in the mortality table.

UNITED STATES TABLES.

TABLE I.—Classification of the ages of those who died during the year ending June 1, 1850—white, free colored, and slave—with the causes of death.

	AGES.									
	Under 1.		1 and under 6.		6 and under 10.		10 and under 20.		20 and under 50.

NOTE.—Average age of white deceased 25.45 yrs., colored 21.39, supposing those under 1 to have lived 6 mos., and those between 1 and 5, 3 years, &c. which is not true in point of fact, but sufficiently so for the comparison. Free colored in Alabama 28, District of Columbia 204, Delaware 241, Florida 8, Georgia 46, Kentucky 184, Louisiana 165, Maryland 1,220, Mississippi 15, Missouri 83, New Jersey 324, North Carolina 462, South Carolina 81, Tennessee 125, Virginia 601. In Alabama 5 slaves died aged 105, 2 106; Arkansas 1 white 105, and 1 slave 110; District of Columbia 1 slave 103; Delaware 1 free colored 100, and 1 107; Georgia 1 white 105, 1 107, 3 slaves 103, 2 105, 1 129, 1 131; Michigan 1 white 103, 1 110; New Jersey 1 colored 114, 1 109; New York 1 white 102, 1 103, 1 free colored 104, 1 105, 2 110, 1 113; North Carolina 1 Indian female 140, 1 slave 120; Texas 1 slave 115.

APPENDIX.

LETTER FROM DR. EDWARD JARVIS, OF MASSACHUSETTS, UPON THE CLASSIFICATION OF DISEASES.

DORCHESTER, MASS., September 22, 1855.

DEAR SIR: I have your late favor of the 17th ult. now before me, and also the nosological nomenclature of the mortality of the United States in the year ending June, 1850.

I have examined the catalogue of diseases with very great care in all its relations. I have compared it with the established and authorized systems, and especially those adopted by the American National Medical Association and published in their Transactions for 1847, and by the Registration office of England. I have moreover submitted your papers to some of the most learned scholars and professors of medical science in New England.

In order to have this nosology of the Census the most perfect and in the best accordance with the received views of the present time, I have examined the reports of mortality of every State and city in the Union which have published their bills, and also the English and some of the Swiss reports, as well as the best writers on nosology. The result of all this inquiry, which has taken my time since the receipt of yours, I now send to you.

Your document is to be not only permanent, but also of very extensive use. It is to speak to the whole world of the diseases and mortality of the United States in the year 1849-'50; and it will be to them, for the present at least, the only authority in these matters. It is also to speak to all future ages of the deaths and their causes in this country at the present time, and perhaps it will be the only authority that will survive.

It is therefore of the utmost consequence that your statements should not only correspond exactly with the facts, but also be so clearly made that they be perfectly understood by all, and in the same way, and that the facts they represent be placed distinctly in the minds of all your readers.

For these purposes, I have made, and I propose to you to make, sundry and divers alterations in the nosological system that you sent to me, which will bring it more into harmony with the best scientific ideas of the time, and place the country, as to its mortality and the causes thereof, and you, as the historian of these matters for 1850, rightly before the world.

In doing this work, I have had much occasion to regret that you could not send me all the original returns, or, at least, a copy of all the manifold names of diseases or causes of death, which came to your office from the several districts of the Union, and also the names of the States and the counties in which they were found.

A great majority of these names of diseases were to be translated into scientific and more intelligible language. It is not always easy to determine what disease a popular term represents, in what class it shall be included, and what legitimate name shall be used for it there.

Looking at the catalogue of names you sent to me, and which is condensed from the multifarious list that came to you, looking also at the explanations you have given in connection with your list, it is manifest that there is, and there must be, some latitude in this translation and interpretation, and that also there may be some difference of opinion among the various persons who examine the original returns.

Many of these popular names of diseases have only a local use and meaning, many are not even known beyond the district where they are used. It is, then, improbable that any one man, however learned in this science, could understand and interpret and arrange the whole, and yet it is very necessary that all the diseases or causes of death reported to you should be faithfully represented and described in some of the classes and by some of the terms you adopt, and that few or none should be put into the uninformative class of the "unknown;" nor should they be published under names that will convey no ideas, or uncertain ideas, or different ideas to different persons.

I was, therefore, desirous, and in my former correspondence with you I urged, that a physician who is an accomplished medical scholar should have the supervision of this branch of your department; that he should carefully examine all the original returns, and reduce their manifold and varied language to the legitimate and recognized nomenclature, and then, whenever he should find any word of local and doubtful or unintelligible meaning, he should correspond with the best physicians of the State or region where the unknown words were found, and thus ascertain what disease they were intended to represent.

Wanting the original names, from which, perhaps, I might have made a different list from this which I now send to you, I have taken this, your translated and condensed catalogue, and made further alterations, as you will see, based, of course, on the facts therein stated.

In doing this I have omitted the names of several diseases which alone and unaccompanied are not fatal, and also several which have no distinct and specific meaning. Some of them I propose to include among the "unknown" because the disease stated gives no clue to the real cause of death. There are others among these names of disease which, although not the real cause of death, yet indicate that some disease of the same class, or of the same organ or system of organs, produced the fatal event. These I propose to include in the genus or class in general where they are found, without attempting to specify their particular nature.

I have condensed several names which are synonymous of each other.

I have exchanged several names for others which were considered as the better representatives of their diseases.

I have also added some diseases that were omitted, but which are in the systems adopted here and elsewhere, and which are the causes of considerable mortality.

In this way I have reduced the list of diseases from the one hundred and forty-eight given in your paper to one hundred and fourteen, which include all that you present, besides some others which I have added.

1, chicken pox; 2, disease of eyes; 3, herpes; 4, hives; 5, mumps; 6, onanism; 7, ringworm; 8, suppressed menses; 9, tetter; 10, vaccination; 11, fluor albus, are all omitted for the reason first stated: standing alone, they cannot safely be given as the causes of death. For yourself, and for the country, you would not take the responsibility of stating abroad that these diseases, which are not destructive elsewhere, are fatal here, nor would you state to the readers of another year or another age, that these maladies, which were harmless as to life, before and after 1850, were in that year the causes of death.

It need not be denied that these diseases did exist at the time of death, but they were merely incidents in connection with the really fatal disease, or perhaps consequences of it; they may have performed a part, at most a small part, of the destructive process, but could not have accomplished it alone.

1. *Chicken pox*, a very mild and harmless disease, yet sometimes bears so strong a resemblance to small pox as to be mistaken for it. Probably those cases which are stated to be of fatal chicken pox were really small pox, the real name, if not character, of which was mistaken. It would be proper, therefore, to put these with *diseases of the skin*.

4. *Hives*, *varicella pustular* or *globular*, (not *urticaria*, as in your paper,) chicken pox, or *swine pox*, the former may have been mistaken for small pox, and thus proved fatal. These should be in *diseases of the skin*.

Hives, or *bald hives*, is a name applied to croup; it is a corruption of *heaves*, descriptive of the paroxysms. If there be any evidence that croup was intended, the cases should be transferred to that.

3. *Herpes*, 7. *Ringworm*, 9. *Tetter*, are all harmless diseases, and, unless in combination with other and more serious diseases, could not be assumed as causes of death. Strictly speaking, they should be transferred to the unknown, yet, as they may have been mistaken for some other cutaneous disease, I propose to include these in the *diseases of the skin*.

2. *Disease of the eyes* may involve disease of the brain; but otherwise it is not fatal. It should, therefore, be included in *diseases of the brain and nervous system*.

5. *Mumps* comes under the same category as the last. It may be connected with disease of the brain, and it may coexist with other and fatal disease. It would be safer to put these cases in the *unknown*.

I am aware that the Massachusetts, New York State and city, Kentucky, and Philadelphia reports give cases of *parotitis* (mumps) as causes of death. Yet the English reports omit it, and the National Medical Association excluded it.

6. *Onanism* possibly, but not probably, was a cause of death. It wastes life and produces other disorders. Cases under this head should be put under the *unknown*.

8. *Suppression of menses* (amenorrhœa) is a symptom or consequence of many other diseases. It generally happens in diseases of high excitement, as *fevers*, &c.; and also in diseases of waste—consumption, *scrofula*, and cancer, especially *uterine*. It may be safe to put these cases in the *diseases of the organs of generation*.

11. *Fluor Albus*, unless complicated with disease of the uterus, as inflammation, cancer, &c., is not a fatal disease. This is put in *diseases of organs of generation*.

10. *Vaccination* may have been followed by inflammation, or *erysipelas*, in constitutions peculiarly susceptible, which terminated fatally. These, if known, should be given as the cause of death: otherwise the cases stated to be from this cause should be in the *unknown*; but *small-pox*, certainly, should not include them.

12. *Amputation* comes nearly under the same category as vaccination. It may have been in itself fatal: yet it is probable that such event was rather the result of previous disease, for which the operation was performed; or a subsequent disease, inflammation, *erysipelas*, &c., which should have been stated. Wanting these facts, cases reported under this name should be in the *unknown*.

13. *Cachexia* describes nothing. It signifies merely a depraved or diseased state of the system, a low vitality. These should be in the *unknown*.

14. *Congestion* is equally unintelligible and should be in the same class, the *unknown*.

15. *Congestion of the brain*, probably, is *apoplexy*; yet it may not be. Other affections may have been intended. It should, then, be in *diseases of the brain*.

16. *Cramp*, as ordinarily understood, is not fatal. If this was a real cause of death, and was what is called "cramp in the stomach," it was *colic*; if it was "cramp of the muscles," it was *tetanus* and should be thus arranged: otherwise in the *unknown*.

17. *Eruption* is the most vague and unsatisfactory term, meaning, at most, *disease of the skin*, to which it should probably be transferred.

18. *Brain, congestion of*, probably intended for *apoplexy*. Yet it may be used for other cerebral affections which are not revealed in the returns. I have placed this, therefore, in *diseases of brain and nerves*.

19. *Fever, bilious*, is a most vague and uncertain term. In some regions it seems to be used

for all sorts of fevers, and the word *bilious* for all sorts of difficulties of the digestive organs.

20. *Gastric fever* is probably intended for inflammation of the stomach. Yet it is in many places used as vaguely, in respect to fever, as the word *bilious*.

21. *Winter fever* is more vague than either of the last two. It may mean bilious, or typhus, or synchus.

These three, with specific names, conveys no specific idea, and should be included under the general name of *fever* without further description.

22. *Congestive fever* is merely a form or phase of *typhus*.

23. *Inflammatory fever* is a name sometimes given to cases of *typhus*.

These two are therefore included in *typhus fever*.

24. *Brain fever* is usually intended for *cephalitis*, inflammation of brain, and yet it is sometimes used for typhus fever, in which there is some cerebral irritation. It is safe, however, to call these cases *cephalitis*.

25. *Menses, excess of*, a mere menorrhagia, excess of the menstrual flux, is seldom or never fatal of itself. There is not unfrequently a great and fatal uterine hemorrhage, growing out of uterine disease, which is the true cause of the death. These cases, therefore, should be strictly referred to *uterine hemorrhage*. But as this is generally dependent on an anterior cause, it is better to include the whole in *diseases of the organs of generation*.

Menses, suppression of, already referred to.

26. *Milk leg*, not in itself fatal, yet was an accompaniment of the fatal disease. I include this in *childbirth*.

The last fifteen diseases (12 to 26, inclusive) reappear in their respective genera, or classes, or in the unknown. If, however, you conclude to retain them, or any part of them, it would be well to append a note to each one, thus: *This term has an uncertain meaning, yet it is here printed as found in the original returns*. This would throw the responsibility of unscientific or unreliable statements of the causes of death where it belongs; yet it is best to be accurate, and make the corrections as proposed.

There are also many terms, which being synonyms of each other, are condensed so far as they can be. 27, canker; 28, canker rash; 29, putrid sore throat. These are but various names for *scarlet fever*, which includes them.

30. *Bronchitis*; there seems to be an error in the explanation connected with this term in your paper. It is an inflammation of the mucous membrane of the bronchial tubes in the lungs. It is, however, generally applied to the lining membrane of all the air vessels, both to those in the chest and the throat, and very commonly to those in the head.

It is not exclusively a chronic disease, but is more often acute. Neither is it exclusively a disease of adult years, for children are subject to it.

Nor, on the other, is catarrh exclusively an acute disease, or one of childhood, for it is often chronic and it comes upon persons of all ages.

The true distinction between bronchitis and catarrh, and one that was held by scientific writers is, that the former affected the lining of the bronchi, or larger air tubes *below the throat*, and the latter affected the air passages in the head, principally the lining of the nasal passages. But there is very little discrimination between these diseases, both names being used to designate inflammation of the mucous membrane of any of the air passages. Therefore, 31, *Catarrh*, and 32, *Catarrhal fever*, are both included in bronchitis.

31. *Chlorosis*, is included in *paramentia*, and strictly it should be in diseases of the generative organs.

34. *Debility*; general custom does not confine this cause of death to infancy. The bills of mortality in all the States and cities which have printed them, include deaths from debility at all ages, from infancy to 90 and over. Unless, therefore, your returns limit the deaths under this head to infancy, or you have and use the means of thus limiting the cases, your explanation will not cover the whole ground, and should be omitted. The term itself is a bad one, and amounts to but little more than the unknown.

35. *Hæmorrhoids* is a better term than piles, and includes it.

36. *Head, disease of*, is included in disease of brain, &c.

37. *Inflammation of the brain* is included in *Cephalitis*; 38, *Inflammation of the lungs*, is included in *Pneumonia*; 39, *Inflammation of the throat*, is included in *laryngitis*.

40. *Killed*, is included in *accident*; 41, *Lockjaw*, is included in *tetanus*.

42. *Lungs, disease of*, is included in *respiratory organs, disease of*; 43, *nerves, disease of*, is included in *brain and nervous system, disease of*; 44, *piles* is included in *hæmorrhoids*; 45, *premature birth* is included in *debility*; 46, *putrid sore throat* is included in *scarlet fever*; 47, *salivation* may safely be included in *effects of mercury*; 48, *stomach, disease of*, is included in *digestive organs, disease of*; 49, *summer complaint* is included in *cholera morbus*; 50, *sunstroke* is included in *heat*; 51, *throat, disease of*, is included in *bronchitis and laryngitis*; 52, *venereal* is included in *syphilis*; 53, *bowels, disease of*, is included in *digestive organs, disease of*; 54, *atrophy* is included in *marasmus* which includes *tubercles mesenterica*. These terms, from 27 to 54 inclusive, excepting numbers 30, 34, and 35, are omitted in my text, and condensed with, or replaced by, others.

There are some others concerning which I have great doubts, and yet I have let them remain, mainly for want of doing better.

55. *Dirt eating*. Probably this is secondary to a morbid condition of the stomach, dyspepsia, irritation, or craving for strange things, as in certain female and, perhaps, male diseases, slate pencils are eaten, which may precede death but are not deemed its cause.

56. *Fracture*, alone in itself, is a very doubtful cause of death. The shock communicated to the system by the blow or fall that caused the fracture, may and often does produce death. Also, the subsequent conditions, inflammation, erysipelas, &c., may cause death. Sometimes one has two or more limbs broken, and these in more places than one, and death follows. In this case, it is rather the violent shock to the system than the breaking of the bone, that is the fatal cause. Yet, I have left this, and the preceding, 55, remain.

I have introduced, as you see, several terms to represent either some of yours which I have omitted, or some diseases which I have omitted, or some diseases which seem to be omitted in yours.

These are—	They represent—
1. <i>Anæmia</i>	<i>Consumption of the blood</i> , a common term.
2. <i>Bones, disease of</i>	<i>Necrosis</i> .
3. <i>Cephalitis</i>	<i>Inflammation of the brain</i> ; <i>brain fever</i> .
4. <i>Circulatory organs, disease of</i>	Many cases here are reported under this general class or name.
5. <i>Cold water drinking</i>	A very common cause of death in summer, especially among laborers.
6. <i>Delirium tremens</i>	<i>Mania-a-potu</i> .
7. <i>Digestive organs, disease of</i>	<i>Disease of bowels</i> ; <i>disease of stomach</i> , but not <i>tubercles mesenteria</i> .
8. <i>Enteritis</i>	<i>Inflammation of bowels</i> .
9. <i>Gastritis</i>	<i>Inflammation of stomach</i> .
10. <i>Generative organs, disease of</i>	<i>Flux albus</i> ; <i>disease of uterus</i> ; <i>excessive menses</i> ; <i>uterine hæmorrhage</i> , and perhaps <i>suppressed menses</i> .
11. <i>Hæmorrhoids</i>	<i>Piles</i> .
12. <i>Joint, disease of</i>	Many cases are reported under this title, and I suppose you must have found such in your returns.
13. <i>Pærenia</i>	<i>Diseases of menstruation</i> ; <i>excessive or suppressed menses</i> , (if no other cause of death,) and <i>chlorosis</i> .
14. <i>Pneumonia</i>	<i>Inflammation of lungs</i> .
15. <i>Respiratory organs, disease of</i>	<i>Disease of lungs</i> .
16. <i>Skin, disease of</i>	<i>Eruption</i> ; <i>herpes</i> ; <i>hives</i> , (if not <i>croup</i>); <i>ringworm</i> ; <i>tetter</i> ; <i>chicken pox</i> .

With these alterations, I have made out the list of diseases, which I now send to you on other sheets.

I have made this list according to the alphabetical arrangement, as you have done.

Yet it is better, if possible, to arrange the diseases into classes according to their natural affinities, or the affinities of their causes, or to the organs and systems in which they are found. This plan is adopted by the English Registrar General, by the American National Medical Association, and by the registration officers of Massachusetts and Kentucky, and it shows, at least, the parts or systems of the human frame which suffered, or the general character of the causes that produced the disease.

I have therefore sent you a duplicate schedule of this nosological system, arranged according to this classification.

I hope you will print the entire list of all the names of diseases, or causes of death, that you found in all the returns, with the names of the States from which they came. This will take but a few pages and will do a good service to the investigator of these things. When we prepared the nosological nomenclature for the National Medical Association, in 1847, we obtained all the names that were returned in the Massachusetts reports for several years, and those that were printed in the various States and cities, and from all other sources we could reach. In this way we obtained about eleven hundred names of diseases supposed to be fatal. These we reduced to a scientific catalogue of about one hundred and fifteen. Mr. Farr, of London, did the same for the British government. He found about a thousand popular names, which he reduced and systematised.

There never has been, and there may not be again, another opportunity, such as you now enjoy, of showing to the world the popular names of diseases which are found in the several States and thought to be fatal. Of course, you will not give numbers and tables in connection with this popular nosology, only the bare names, alphabetically arranged, with the names of the States or region where they are used, as New England, Middle, Northwest, Southern, Southwest, or if in only one or two States they should be mentioned. These would take two columns.

I hope I have not delayed you too long. I desired to let you have this earlier: but there was so much investigation needed to determine all the principles and facts that this was impossible; and I would not send you a report less perfect than such as the range of means about me would allow me to give you.*

As it is, it is at your service. Trusting that it may be followed in your book, I am, very respectfully, yours,

EDWARD JARVIS.

J. D. B. DE BOW, Esq.
Superintendent of Census, Washington, D. C.

* In the Compendium of the Census, p. 121, 3d paragraph, Dr. Jarvis is made to say "certainly for one part," instead of "certainly for the seaports," (5th line.)

CLASSIFICATION OF DEATHS IN THE SEVERAL STATES,

EMBRACING*—

- | | |
|--|--------------------------|
| I. CAUSES OF DEATH. | IV. NATIVITIES. |
| II. AGE AND SEX. | V. SEASON OF DECEASE. |
| III. COLOR AND CONDITION. | VI. DURATION OF ILLNESS. |
| VII. OCCUPATIONS.—(See Aggregate Tables of the United States.) | |

* *The instructions to marshals in taking this portion of the census were as follows:*

1. Under heading 1 of schedule Insert the "*name of every person who died during the year ending 1st June, 1850, whose place of abode at the time of his death was in the family.*" The family in which the death occurred from disease is to be considered as having been the place of abode of the deceased. Where the death was sudden, or the result of accident, the usual place of abode should be given, although the death may have occurred during temporary absence and in another family.

2. Under heading 2, entitled *Age*, insert in figures opposite the name the specific age in years of each person at the last birthday. If the exact age cannot be ascertained, insert a number which shall be the nearest approximation to it. The age in years, either exact or estimated, is in all cases to be inserted. If the person be a child which was under one year old, the entry is to be made in the fractional part of a year.

3. Under heading 3, entitled *Sex*, insert the letter M for male, or F for female, opposite the name in all cases.

4. Under heading 4, entitled *Color*, in all cases where the person is *white*, leave the space blank. In all cases where the person is black, insert the letter B. If mulatto, the letter M.

5. Under heading 5, entitled "*Free or slave*," in all cases where the person is free, leave the space blank. In all cases where the person is a slave, make a letter S opposite his or her name.

6. Under heading 6, entitled *Married or widowed*. This column only applies to the free inhabitants. The spaces opposite all slaves are to be left blank. When the deceased, being a free person, has been married, and the wife, or husband, as the case may be, survived, insert (M.) When the deceased *has been* married, but left no wife, or husband, as the case may be, insert (W.) In all other cases where the deceased is unmarried, or whether it is not known whether he or she was ever married, leave the space opposite such names blank.

7. Under heading 7, entitled *Place of birth*. The marshal should ascertain the place of birth of the deceased. If unknown, he should insert "unknown." If born in the town, city, or district where the deceased died, or in a foreign country, insert the name of the State, Territory, government, or country of birth.

8. Under heading 8, entitled *Month in which the person died*, insert, in all cases, the month when the death occurred opposite the name of the deceased. Should it happen that the date is not known, insert "unknown."

9. Under heading 9, entitled *Profession, occupation, or trade*, insert the specific *profession, occupation, or trade*, which the person was known or reputed to follow. Where the deceased, being an adult, had no particular occupation, insert the word "none;" when it is unknown, insert "unknown."

10. Under heading 10, entitled *Disease or cause of death*, insert the name of disease or cause of death opposite each name. The usual name given to a disease is to be inserted. When unknown, state "unknown." Where by accident, as steamboat explosion, so state; where the death was sudden, but natural, say "sudden," and enter also the cause.

11. In column eleven state the number of days' sickness. If of long duration, insert C for chronic.

REMARKS.—At the bottom of the page is left a space for remarks, where the assistant marshal should state any particular malady which has been prevalent in his district, and any cause which may account for the same. He is desired to state the character of the water, the character of the soil or rocks, kind of timber which grows naturally, the existence of natural fertilizers, as lime, or marl, or ores, or any other facts of interest relating to mines, seasons, or any particular or unusual natural phenomena, in fine, record any interesting event or circumstance connected with the history of his region for which he may find space.

In every case where the assistant has reason to believe that a portion of the information sought to be obtained by this schedule can be more accurately ascertained from any reliable bills of mortality, the facts may be abstracted from such registry, according to the form of this schedule, and the same rate of compensation will be allowed as if taken by actual visitation. It is, however, only admissible to avail one's self of such information where the record is of the most reliable nature or character.
